

Y-40 – Current Firmware Update Notes (9 July 2026)

Update History

Current Version

- MCU: 168
- Network: CR443GP_4003(non-China models), CR443NP_4002(China model)
- HDMI: 172

The 9 July 2026 update will address the following:

1. Enables folder and song list browsing via the app for USB playback.
Please also make sure to update the **Onkyo Controller App** to the latest version.
2. Enables exFAT and NTFS support for USB playback.

Update instructions

The firmware can be updated via Miscellaneous > Firmware Update in the Setup Menu.

- "Update via Network"

The firmware is updated via the network.

Procedure)

1. Press the "ENTER" button for execution. After the update is completed, the unit will automatically restart.

- "Updating via USB "

The firmware is updated via USB.

Preparation

- (a) The format of USB storage devices supports the FAT16 or FAT32 file system format.
- (b) Delete any data stored on the USB storage device.
- (c) Download the firmware file from the website to your PC and unzip. Firmware files are named "software.swu".

Important Note: Firmware files are different for China-region models and models sold in all other regions. Please use the firmware file that corresponds to your region.

Procedure:

1. Connect the USB storage device to the USB port of this unit.
2. Press the "ENTER" button for execution. After the update is completed, the unit will automatically restart.

For details, see "Firmware Update" in the Instruction Manual.
