HDMI® Connects You to the Future

Connect your players with just one cable linking to the TV for clean AV unit installation. HDMI terminals pass the latest video formats to your display, including those supporting 4K/60 Hz, HDR, BT.2020, and HDCP 2.2. There's also an Audio Return Channel (ARC) for amplifying TV broadcasts.

Amp Power Adds Thrills to Music, Movies, Gaming, and TV Programs

Discrete analog amps (not an all-in-one integrated circuit) deliver high instantaneous current to the speakers for dynamic audio reproduction. Controlled power is the cornerstone of Onkyo's amplification philosophy.

AccuEO Room Acoustic Calibration

AccuEQ sets essential speaker conditions such as distance, output, and crossover, and EQs for a clear and balanced audio image that's free from distortion caused by the acoustics of your **AccuEQ** ROOM CALIBRATION listening space.

Bluetooth® Wireless Technology Featuring Oualcomm[®] aptX[™] audio

Bluetooth® wireless technology mirrors whatever's playing on your mobile device, laptop, or PC on the home theater. Devices supporting Qualcomm[®] aptX[™] codec deliver virtually lossless low-latency playback, while original Advanced Music Optimizer mode enriches any compressed audio for a more satisfying musical experience.

(Streaming device not included)

Enjoy Music via USB Input

Connect a compatible USB memory device filled with MP3, WMA, or AAC audio files to enjoy clear and powerful reproduction of your music. Quality D/A conversion and a selection of DSP listening programs further enhance sound to suit different kinds of music.

Easy Connection Guide Simplifies Setup

Connections to speakers and external devices are clearly labeled and illustrated on the rear panel-the connection diagram is readable upside down to make things easy when you're leaning over the top of the receiver.
